MID Term Assessment

Md Bakhtiar Chowdhury

ID: 2121210061

Department: CSE

Semester: Summer 2023

Batch: 21th

Course Title: Digital Logic Design

Course Code: CSE 213

Submitted To:

Md. Shahin Khan

Lecturer, Dept. of CSE/CSIT

Victoria University of Bangladesh

Submission Date: 18 August, 2023

Answer to the question no.1(a)

a) Define DLD:- Digital logic design is the process of designing and implementing digital circuits using various electronic components and logical operators. These digital circuits process binary information to perform specific tasks, make decisions, or execute algorithms. Digital logic design forms the foundation of modern digital systems, including computers, microcontrollers, communication devices and more.

Fields of digital logic design.

- ① Digital integrated circuit design.
- ② Field-programmable gate array design
- ③ application specific integrated circuit design.
- ④ Digital system design.
- ⑤ computer architecture
- ⑥ Digital signal processing
- ⑦ control system design.
- ⑧ Digital communication system.

Answer to the question NO 1(b)

Ans. Advantages of DLD

- # High accuracy and precision
- # Ease of replication and storage
- # Low signal loss
- # Noise immunity
- # Logical operations
- # Ease of integration.
- # Flexibility and reconfigurability.
- # Ease of debugging
- # Design automation
- # Low power consumption

Answer to the question NO 2(a)

a) $(715)_{10} = ?_8$

$$\begin{array}{r} 8 \overline{) 715} \\ \underline{8 \times 89 = 712} \\ 3 \\ \underline{8 \times 1 = 8} \\ 0 \\ \underline{8 \times 1 = 8} \\ 0 \\ \underline{0 - 0} \\ 0 \end{array}$$

$$\begin{array}{r} 8 \overline{) 715} \\ \underline{64} \\ 75 \\ \underline{72} \\ 3 \end{array}$$

$$\begin{array}{r} 8 \overline{) 89} \\ \underline{8} \\ 9 \\ \underline{8} \\ 1 \end{array}$$

$$\begin{array}{r} 8 \overline{) 11} \\ \underline{8} \\ 3 \end{array}$$

$\therefore (715)_{10} = (1313)_8$ Ans.

Answer to the question NO 2(b)

b) $(AC09)_{16} = ?_{10}$

$$\begin{array}{l} AC09 \\ \left\{ \begin{array}{l} \\ \\ \\ \\ \end{array} \right. \\ \begin{array}{l} \\ \\ \\ \end{array} \\ \begin{array}{l} \\ \\ \\ \end{array} \\ \begin{array}{l} \\ \\ \\ \end{array} \end{array}$$

$$\begin{aligned} (AC09)_{16} &= (10 \times 16^3) + (12 \times 16^2) + (0 \times 16^1) + (9 \times 16^0) \\ &= 40960 + 3072 + 9 \\ &= (44041)_{10} \text{ Ans.} \end{aligned}$$

Answer to the question no 2(c)

$$c) (100011)_2 = ?_{10}$$

$$(100011)_2 = (1 \times 2^5) + (0 \times 2^4) + (0 \times 2^3) + (0 \times 2^2) + (1 \times 2^1) + (1 \times 2^0)$$

$$= 32 + 2 + 1$$

$$= (35)_{10}$$

$$\therefore (100011)_2 = (35)_{10} \text{ Ans.}$$

Answer to the question no 2(d)

$$d) (12435)_8 = ?_{10}$$

$$(12435)_8 = (1 \times 8^4) + (2 \times 8^3) + (4 \times 8^2) + (3 \times 8^1) + (5 \times 8^0)$$

$$= 4096 + 1024 + 256 + 24 + 5$$

$$= (5405)_{10}$$

$$\therefore (12435)_8 = (5405)_{10} \text{ Ans.}$$

3 a) Define with example of LSB & MSB.

LSB: "Least significant bit" is the bit position in a binary integer giving the units value, that is, determining whether the number is even or odd. The LSB is sometimes referred to as the low order bit or right-most bit.

Ex: 10010101
 ↑
 LSB

MSB: "most significant byte" The meaning is parallel to the above. It is the byte in that position of a multi-byte number which has the greatest value.

Ex: 10010101
 ↑
 MSB

Answer to the question 3(b)

i) $(37)_{10} = ?_6$

$$\begin{array}{r} 6 \overline{) 37} \\ \underline{6 \cdot 6} \\ 1 \\ \underline{6 } \\ 0 \end{array} \quad \begin{array}{r} 6 \overline{) 37} \\ \underline{36} \\ 1 \end{array} \quad \begin{array}{r} 6 \overline{) 6} \\ \underline{6} \\ 0 \end{array}$$

$\therefore (37)_{10} = (101)_6$ Answer.

ii) $(53)_6 = ?_{10}$

$$\begin{aligned} (53)_6 &= (5 \times 6^1) + (3 \times 6^0) \\ &= 30 + 3 \\ &= (33)_{10} \end{aligned}$$

$\therefore (53)_6 = (33)_{10}$

iii) $(10762)_8 = ?_{16}$

octal to binary

$$(10762)_8 = (001000111110010)_2$$

then binary to hexadecimal

$$0001 = 1$$

$$0001 = 1 \quad \text{4 bits group.}$$

$$1111 = F$$

$$0010 = 2$$

$$\therefore (10762)_8 = (11F2)_{16}$$

$$(iv) (AB9EF)_{16} = ?_8$$

step 1 Hexadecimal to binary

$$A \rightarrow 1010$$

$$B \Rightarrow 1011$$

$$9 \rightarrow 1001$$

$$E \rightarrow 1110$$

$$F \rightarrow 1111$$

$$(AB9EF)_{16} = (10101011100111101111)_2$$

step 2 - Binary to octal

$$010 \rightarrow 2$$

$$101 \rightarrow 5$$

$$011 \rightarrow 3$$

$$100 \rightarrow 4 \quad \text{3 bit group}$$

$$111 \rightarrow 7$$

$$101 \rightarrow 5$$

$$111 \rightarrow 7$$

$$(10101011100111101111)_2 = (2534757)_8$$

$$\therefore (AB9EF)_{16} = (2534757)_8 \text{ Ans.}$$
