

# Victoria University Of Bangladesh

Course title ~ ENG 116

## *Bachelor of Tourism & Hotel Management*

Submitted By ~ Intermediate Reading and Writing

Name ~ Khan Sifat

Student ID: 1521530011

Batch - 53

Program - BTHM

## **SECTION ~ B**

In the realm of literature, I am known as Seraphina, a fictional character endowed with the extraordinary ability to avert man-made disasters. My power, coined "Crisis Aegis," enables me to anticipate and neutralize impending calamities with unparalleled precision. Clad in an ethereal armor that resonates with protective energies, I swiftly navigate through the chaos, guided by an innate sense of impending doom. Seraphina's arrival is marked by a calming aura, and as she extends her hand, a shield of translucent energy envelops those in peril, shielding them from harm. Whether facing the brink of technological catastrophe or the threat of human conflict, Seraphina stands as a beacon of hope, weaving a tapestry of safety through her supernatural prowess, ensuring that the tapestry of life remains intact in the face of adversity.

**2.**In an age dominated by technological advancements, the debate over whether schools should limit the use of computers and other technology for students has become increasingly pertinent. Advocates for restricting technology in schools argue that excessive screen time hampers social

skills, contributes to sedentary lifestyles, and may impede traditional learning methods. However, taking a contrary stance, I posit that embracing technology in education is essential for preparing students for the digital landscape they will encounter in the workforce. In an era where technology is integral to daily life, schools must equip students with the skills and adaptability needed to navigate the modern world. Integrating computers into classrooms fosters digital literacy, encourages critical thinking through online resources, and provides a platform for collaborative learning. Limiting technology in schools may hinder educational progress, leaving students ill-prepared for the demands of an increasingly interconnected and technologically driven society. Therefore, a judicious incorporation of technology into education is imperative to empower students with the tools they need for future success.
