Answer to the question number 201

- (a) Are you coming tonight?
- (b) He is not playing golf now.
- (c) Does he eat nice everyday?
- (d) Do you play tennis this Sunday?
- (e) Do not work at the moment / ~~work at the~~
working at the moment.
- (f) They go to a restaurant everyday. Saturday.
- (g) Does he come to London often?
- (h) She does not go to the cinema very often.
- (i) He is playing tennis now.
- (j) He is playing tennis now.

Answer to the question number : 02

In your mentioned pie charts, we are seeing the average household expenditures in a country in 1950 and 2010.

In 1950, we can see that, the housing expenditure was 73.3%, food 11.2%, health care 2.4%, education 6.6%, transportation 3.3% and others expenditures was 4.4%.

On the other hand, in 2010 housing expenditures is average 22.0% which is decreased, food 34.0% which is increased from 1950 to 2010, health care in 2010 is 4.5% which is increased, education 6.3% which is decreased and the others expenditures in 2010 is 10.2% which is increased from 1950.

Also we can see that, in 1950, the transportation expenditures was 3.3% which is 14.0% in 2010, It's increased in 2010.

In 2010, food, health care, transportations and others average expenditures are increased from

1950 and housing, education's expenditures has decreased. In 1950, here housing and education's average expenditures was greater than 2010.

Answer to the question number 03

Introduction : Going down memory lane, from our past to our present, from the day we were born up till this very moment, from the stone ages down to our present day, there is one major affiliation associated with all humans which is change and the role of the internet. Change is the only constant thing in life and among all the student attributes involved with the word change, knowledge is the most important. The human brain as small and fragile as can be can store information totalling about 254 EB of data, which is approximately 1 billion GB. That is equivalent to stacking CD-ROMs from earth to the moon, thus indicating a very large volume of data storage. With this size of information available for storage in our brain, it

is safe to say, that there may be a difficulty in storing the right kind of knowledge thus leading to the creation of computers during the industrial revolution. The first computer, called the Analytical Engine, was designed by British mathematician Charles Babbage ~~betw~~ between 1833 and 1871. In the past, a 'computer' was a person whose duty it was to add and subtract numbers as well as entering the results into different tables. The tables were then transferred into books for different purposes, in order for people to use them to complete various tasks. Tasks such as launching artillery shells accurately or calculating taxes and a whole lot more were completed using those calculations by human.

In this essay, we will argue that, the internet has made the society better.

Body :

Importances of Internet:

The internet has transformed the world into a global village by breaking down geographical barriers and facilitating seamless communication. Social media platforms, email services and instant messaging applications have enabled people to connect with one another ~~also~~ across the globe in real time. As a result, individuals are now more informed and interconnected than ever before.

One of the internet's most profound contributions to society is its role in democratizing information. Previously, access to knowledge was often limited to privileged individuals or institutions. With the internet, information is now accessible to anyone with an internet connection.

The internet has become a powerful driver of economic growth, providing new oppor-

tunities, for entrepreneurship, innovation and employment. E-commerce platforms have opened up global markets for businesses of all sizes, enabling them to reach customers beyond their local boundaries. This increased economic activity has led to job creation and the emergence of new industries. Moreover, the internet has facilitated remote work, allowing for greater flexibility and inclusivity in the workforce.

The internet has transformed the education landscape, making learning more accessible and flexible. Online courses, educational videos and interactive learning platforms have democratized education by breaking down traditional barriers to entry. This has particularly benefited individuals in remote areas or those facing physical or financial constraints. The internet's role in education has not only expanded

Opportunities but has also fostered a culture of continuous learning and skill development.

The dark side of the Internet: It

However, even with the help of Internet in making life easier for everyone, there are quite a number of disadvantages and problems affecting the internet. To start, let us take a deep look at the information we gather from the net, the things we read about the pictures we see, an individual or organization is responsible for the contents, also the same individual or organization may decide to take down the contents or worse edit it to suit their personal, cultural and religious views. Needless to say, that the internet can, therefore, be polluted by people or interest in such a way that true facts from historical records can be easily edited or deleted by those power, i.e. govern

ment, so much so that only their own views will stand which in my own point of view is against human interest as everyone is entitled to factual truth.

Conclusion :

I believe that, the internet is ultimately more beneficial than detrimental to people. The internet has been ~~included~~ inculcated into our educational system as said earlier (learning is much easier and faster and even factual than before) and our businesses (we can now expand our reach of goods and services to heterogeneous people across the globe). Let us make a differentiation concerning the usage. To spend a part of our day or our time on the internet is quite normal for many people. They use this kind of medium to get information about

all kinds of things varying, from educational to social information. Some individuals are interested in chatting, probably they are members of community, but whatever it is you are looking for, you will find it. Even if you want to have very specific information, you will find it in a short time all thanks to the internet, which has brought more positive impact to our everyday lives than negatives.
